

Product Announcement: New Addressable Detectors

July 2018

Honeywell Silent Knight is pleased to announce the availability of our new line of addressable smoke detectors, bases and accessories known as the SK-W Series. This next generation of detectors has been designed to meet the latest code requirements and features improved fire detection capabilities as well as a more modern design. The SK-W Series product line includes photoelectric, photoelectric/thermal and heat detectors as well as complimentary bases and accessories.

Introducing the SK-W Series from Honeywell Silent Knight.

Simple. Smart. Reliable.

Simple

- More attractive streamlined design available in a contemporary white finish to better compliment modern building aesthetics (with ivory and black color kits also available for special application needs)
- Easier to identify magnet test point with larger marking and dual LEDs to verify testing

Smart

- Improved detection for fires involving synthetic materials that are commonly used in modern buildings and improved system reliability against false (nuisance) alarms
- Designed to meet new industry requirements that go into effect in 2020 – the UL 268 7th Edition standards – ensuring business continuity after the new code goes into effect

Reliable

- Compatible with both 5000 and 6000 Series Honeywell Silent Knight addressable fire alarm control panels and can be used in combination with legacy SK Series detectors on the same system
- Backwards compatible with existing B210LP base installations preventing the need to rewire retrofits
